Welcome to Issue 212

Highlights

08 The naming game
Richard Swinburne dissects Nvidia’s simpler but far more confusing laptop GPU naming scheme.

10 Gaming snake oil
Supplements are the latest craze to hit gaming but Tracy King thinks we’ve seen it all before.

16 Intel Core i9–10850K
Intel’s 10-core, 20-thread processor is available – emphasis on available – for under £400, but how does it fare?

18 Thermaltake Tower 100
This glass-sided mini-ITX tower is a great way to show off your components, but does it have the cooling performance too?

20 Asus ROG Swift PG259QNR
With its 360Hz refresh rate and built-in latency analyser, this display takes gaming performance to the next level.

42 Cracking cases
Looking for a top-of-the-line ATX case? Antony Leather tests five of the latest premium options.

50 Marvellous mechs
Edward Chester puts eight of the latest high-end mechanical keyboards through their paces.

68 The joke’s on you
There’s nothing wrong with games being funny, but they shouldn’t be laughing at how bad they are, argues Rick Lane.

74 Reality Check
Rick Lane checks out the latest VR gaming news and reviews Jurassic World: Aftermath.

76 Build a first-class water-cooled PC
This comprehensive guide teaches you how to build a fully water-cooled PC with the latest high-end gaming components.

86 Switching gear
Mechanical keyboards are the choice du jour but what makes them so special? Edward Chester explains all.

94 Raspberry Pi Pico
Gareth Halfacree puts Raspberry Pi’s tiny new microcontroller to the test.

98 PCI-E 4 risers inbound
PCI-E riser cables are a great way to jazz up your build, and now PCI-E 4 cables could be on their way.

100 Shiny!
Antony Leather shows you how to dismantle your waterblocks and clean them to a shine.

106 Pentium 4 revisited
Much maligned but well remembered, Ben Hardwidge looks back on Intel’s NetBurst microarchitecture.

114 Making the sale
AMD may be winning the review wars but many buyers are still opting for Intel, explains James Gorbold.
